Trestle mania

Dror Benshetrit's latest project - a geometrical truss system that can be used as table legs or to buttress a building or a bridge - is rebranding the one-time product designer as a serious player in the field of architecture and engineering.
DEATH AND LIFE OF THE SPACE FRAME

Dror is an Israeli designer who has been known for his innovative and functional furniture designs. He is based in Tel Aviv and works on projects that combine traditional craftsmanship with modern technology.

One of his most notable works is the "Space Frame," a structure made of interconnected metal rods that form a grid-like pattern. This design allows for a variety of uses, from office furniture to architectural elements.

Dror's approach to design is rooted in a deep understanding of materials and their properties, as well as a commitment to sustainability. He frequently collaborates with other artists and architects to create unique and cutting-edge designs.

In addition to his furniture designs, Dror is also known for his work in developing new materials and manufacturing processes. His focus on innovation and sustainability has earned him recognition both in Israel and internationally.

Dror's work continues to push the boundaries of traditional design, offering new possibilities for how we live and work in the modern world.
